

PepperJet

- Less-than-lethal pepper spray ejector
- Optimum Pressure Technology (OPT)
- New angled design
- Pepper spray fog up to 60 feet
- New easy-to-fill design
- Built-in pressure gauge

The PepperJet is a new less-than-lethal Oleoresin Capsicum (OC-Pepper Spray) gas powered ejector weapon incorporating features that our customers have been asking for. The PepperJet utilizes Optimum Pressure Technology (OPT), providing the appropriate gas pressure to generate the micron-sized fog particles that have proven very effective for controlling combative behavior, stopping fighting in seconds and reducing the possibility of injuries to officers or combatants.

The PepperJet is very effective with large combatant or rioting groups, such as may be present in large exercise yards and cafeterias. The narrow fog delivery pattern allows control of specific individuals or a small group, eliminating the need to affect a large group unless necessary.

The new easy-to-fill design features an all-

aluminum pressure bottle that is quickly unscrewed and refilled. The built-in pressure gauge indicates the remaining pressure and ensures that you know the condition of your weapon before use. The new angled cylinder design allows the maximum number of accurate shots with appropriate chemical solution in each shot.

The PepperJet is designed to carry up to 2 liters of OC chemical solution, twice the amount of previous devices. The lightweight aluminum cylinder results in a nominal weight of approximately 13 pounds, easy to carry and operate. The convenient shoulder strap with comfort pad allows carrying the unit slung over the shoulder yet is easily raised for firing when necessary. The operator controls the length of each chemical burst with the simple-to-operate lever action valve.

Specifications

External Dimensions:

4.5" diameter
24" length

Weight:

(Full) 12 lbs.
(Empty) 8 lbs.

Capacity:

3.95 lbs. Oleoresin Capsicum formulation

Optional solutions available:

Inert (Training Aid)

Accessories Available:

Refilling Kit
Refilling Solution
Extension Tube
Remote Control, Electrical
Instructional Video
Replaceable shooting tips

Notice:

This product is available for sale only to pre-qualified State and Federal agencies. Please contact our office for qualification information.

The 15-Degree Difference

The PepperJet features a built-in 15-degree angle between nozzle and bottle. This angle design ensures that all liquid will be dispensed. All liquid will be drawn through the nozzle even when the PepperJet must be level when fired.
